Photogrammetry or images of knowledge and technology to extract information about the area and its surroundings from images taken with the camera. This science is widely used in air mapping and terrain mapping. Photogrammetry requires aerial photography, and the end result is based on the processes performed. Pix4Dmapper is one of the leading programs in this field. With this program you can capture different images of the area now manually or with flying helicopters and finally get a output map by presenting these images in the software. Depending on the size and quality of the image, the processing process will change, but we can assure you that thanks to a professional team, the processor provides the necessary processing speed and the output will be very satisfactory. The software automatically displays the areas and effects of different parts of the earth in different colors. In the production and processing stages, there are a wide range of parameters that can be combined with human intelligence with machine intelligence to get the end result you want. Features Pix4Dmapper Software Simple and Neat Working Conditions Simple Operation With Guide to accurate surface mapping for use in Air mapping Precision Systems with the ability to change different parts after processing images The ability to calculate the area and volume of desired areas of Generate Manual to display topographical map status realistic textured 3D grid for the best visualization required by the Pix4Dmapper Picture System Installation Guide Read Readme.txt file in the Crack folder.
